SUMMARY

Software Developer with hands-on experience building full-stack web applications using Django, Flask, React.js, Node.js, Java, and Python. Passionate about developing scalable, responsive, and user-focused software solutions with REST APIs, SQL/NoSQL databases, and modern JavaScript frameworks while continuously learning best development practices.

EDUCATION

LJ Institute of Engineering and Technology

Bachelor of Computer Science and Engineering with Cyber Security

Ahmedabad, Gujarat

Sep. 2024 – Present

PROJECTS

Meal Planner – Personalized Meal Planning Web Application

[GitHub](#) | [Live Demo](#)

Python, Flask, PostgreSQL, HTML, CSS, Bootstrap, JavaScript

- **Meal Planning Engine:** Developed a full-stack Flask web app that generates customized weekly meal plans using BMR-based calorie calculation with activity-level adjustments, macro-nutrient (Protein, Carbs, Fats) distribution, and AI-powered daily health tips with interactive nutrition charts.
- **Authentication & Admin:** Implemented session-based authentication with hashed password storage, protected routes, and an admin dashboard for managing registered users, monitoring generated meal plans, and reviewing platform activity.
- **Responsive Design & Database:** Designed a fully responsive Bootstrap UI with dynamic JavaScript charts; modelled user health profiles, meal plans, and session data in PostgreSQL with efficient CRUD operations.

ALTURA Coffee – E-commerce Website

[GitHub](#) | [Live Demo](#)

HTML, CSS, JavaScript

- **E-commerce Frontend:** Built a multi-page coffee e-commerce platform featuring a modern landing page, product menu with filtering, interactive shopping cart with real-time item management, and a structured checkout experience – deployed on Vercel.
- **Authentication & UX:** Implemented client-side login and signup flows with form validation, session persistence via localStorage, and smooth UI transitions for a seamless user experience across all device sizes.
- **Responsive UI:** Crafted a fully responsive design with custom CSS and vanilla JavaScript, ensuring consistent layout and accessibility across mobile, tablet, and desktop viewports.

CarVerse – Car Rental System

[GitHub](#)

Java 17, JDBC, MySQL, Jakarta Mail API

- **Rental & Billing:** Built a console-based car rental platform with filter-based car search, trip booking, real-time billing with late-fee calculation via MySQL stored procedures, multi-mode payment (Cash, Card, UPI), and automated email bill delivery using Jakarta Mail API.
- **Admin & Security:** Admin module manages fleet inventory and generates revenue reports via stored procedures; customer records maintained with a custom linked list; passwords secured with custom hashing algorithm.

AI Document Analyzer – Classification & Intelligent Indexing

[GitHub](#)

Python, Streamlit, PyTorch, Hugging Face Transformers, MySQL

- **AI Pipeline:** Built a document ingestion pipeline that extracts text from PDF, DOCX, and TXT files and applies Transformer models for automatic classification (Finance, HR, Legal) and abstractive summarization.
- **Access Control & Search:** Enforced role-based access control (Admin, HR, Finance, Legal) so users only view department-relevant documents; implemented keyword-based ranked search across the indexed corpus.

PROGRAMMING SKILLS

Languages: Java, Python, JavaScript, SQL

Frontend: HTML, CSS, React.js, Bootstrap, Tailwind CSS

Backend: Node.js, Express.js, Django, Flask, Streamlit

Databases: MongoDB, PostgreSQL, MySQL

Tools: Git, GitHub, VS Code, Postman, Maven, JDBC, npm
